Data Modelling and Form Design

Aim

To design and develop a Vehicle Service Request Form using Zoho Creator by creating a structured form, applying appropriate validations, and generating a report for managing service requests.

Theory

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

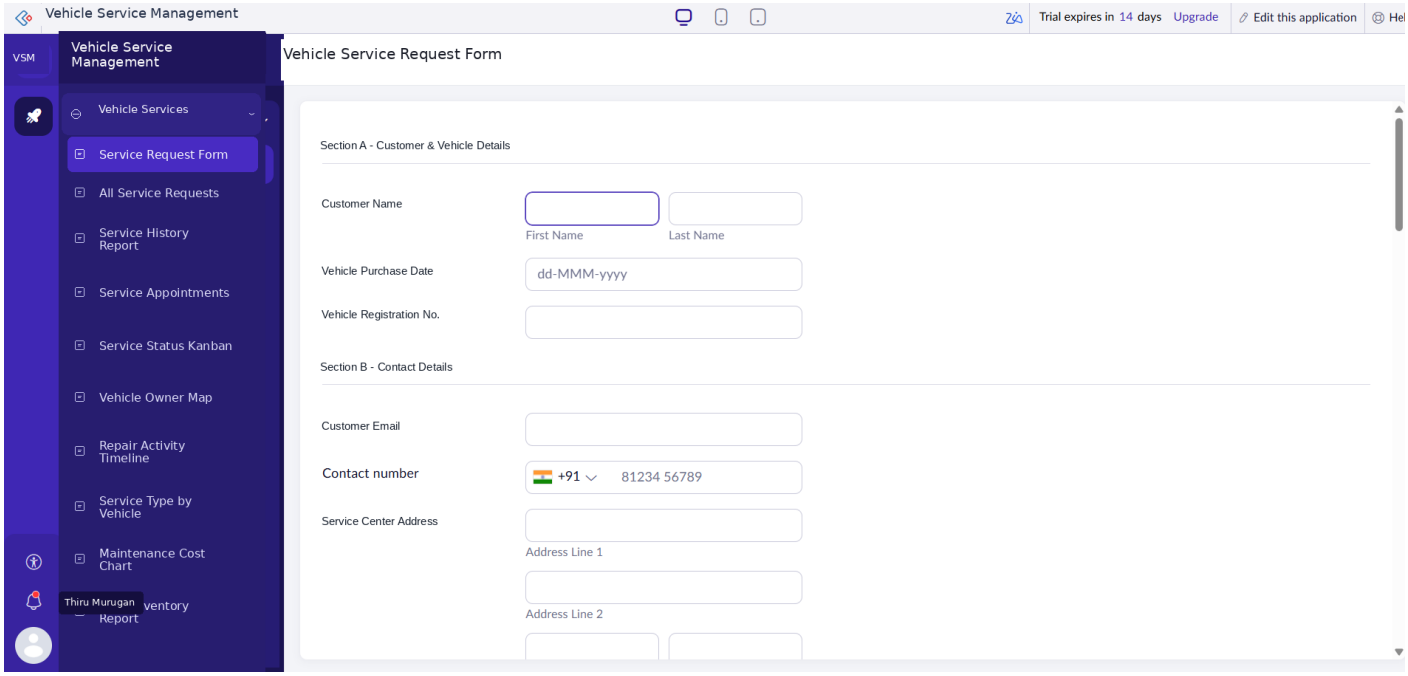

In this experiment, a **Vehicle_Service_Request_Form** is designed to collect customer details, contact information, vehicle specifications and service history details, service requirements, reported vehicle issues, and service consent. The form is divided into four sections: Customer Details, Contact Details, Vehicle Details, and Service Requirements & Consent.

Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, a valid vehicle registration number and non-negative odometer values, and compulsory service consent. The submitted data is
displayed in the Vehicle_Service_Request_Report for review and service scheduling.

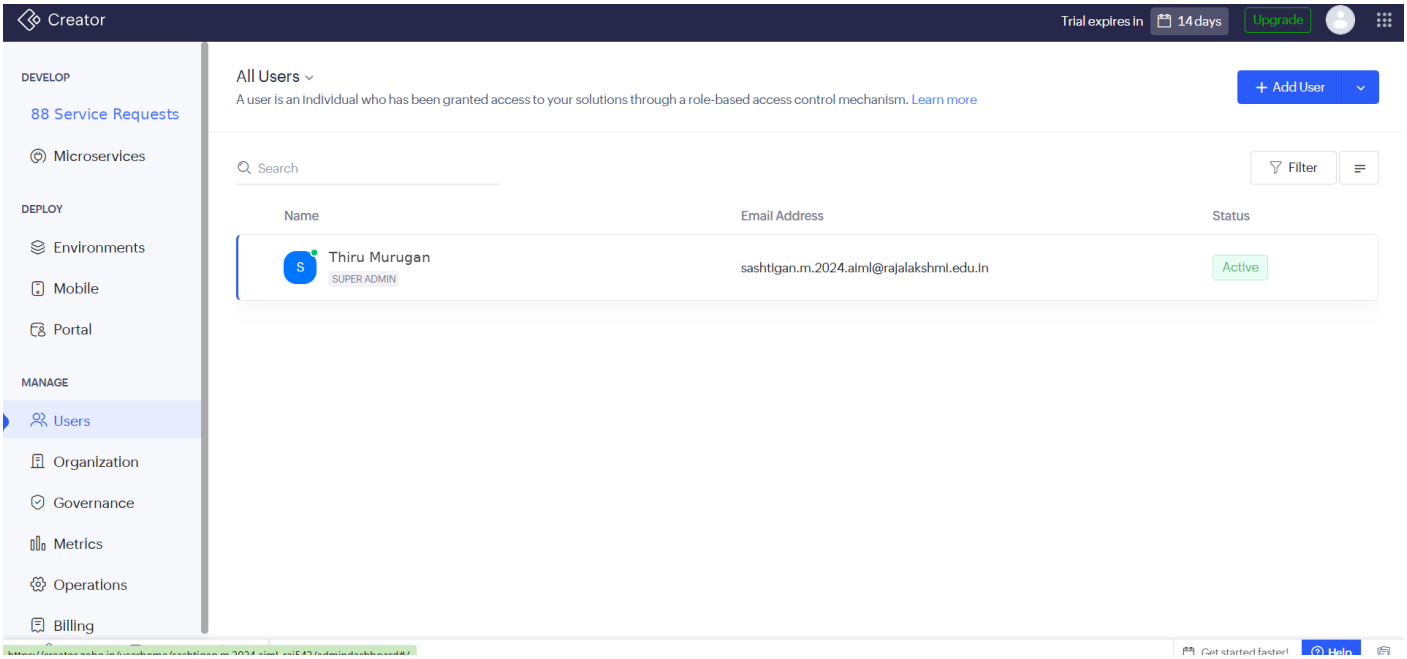

Procedure

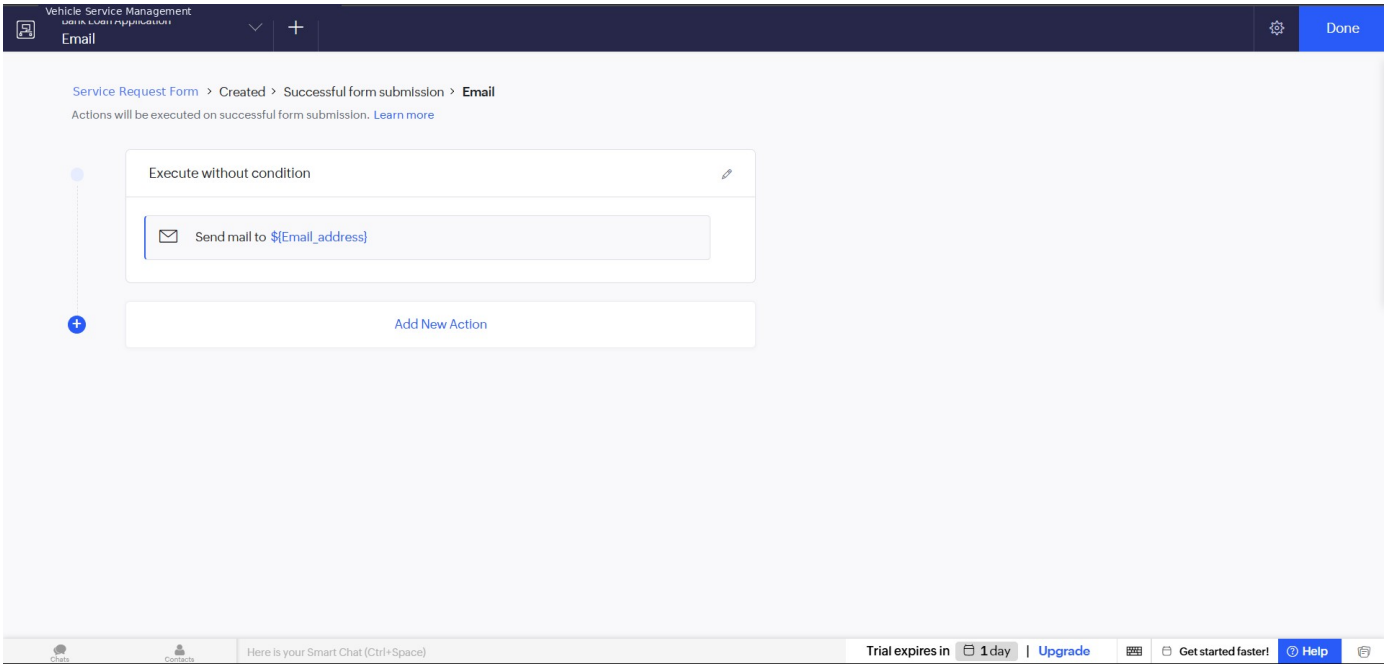

1. Open Zoho Creator and create the Vehicle Service Management application.
2. Create the **Vehicle_Service_Request_Form**.
3. Add the required fields for customer, contact, vehicle, service, and consent details.
4. Organize the fields into the four specified sections.
5. Configure mandatory fields and apply the required validation rules.
6. Save and preview the form.
7. Enter sample customer and vehicle details and submit a service request.
8. Create the **Vehicle_Service_Request_Report** and verify the submitted records.

9. Filter the records based on service type and vehicle mileage for service scheduling.

Result

The Vehicle Service Request Form was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted service requests were successfully stored and displayed in
the Vehicle_Service_Request_Report for effective review and service scheduling.
