7.Integrating Zoho Creator with Zoho CRM via Connections and APIs

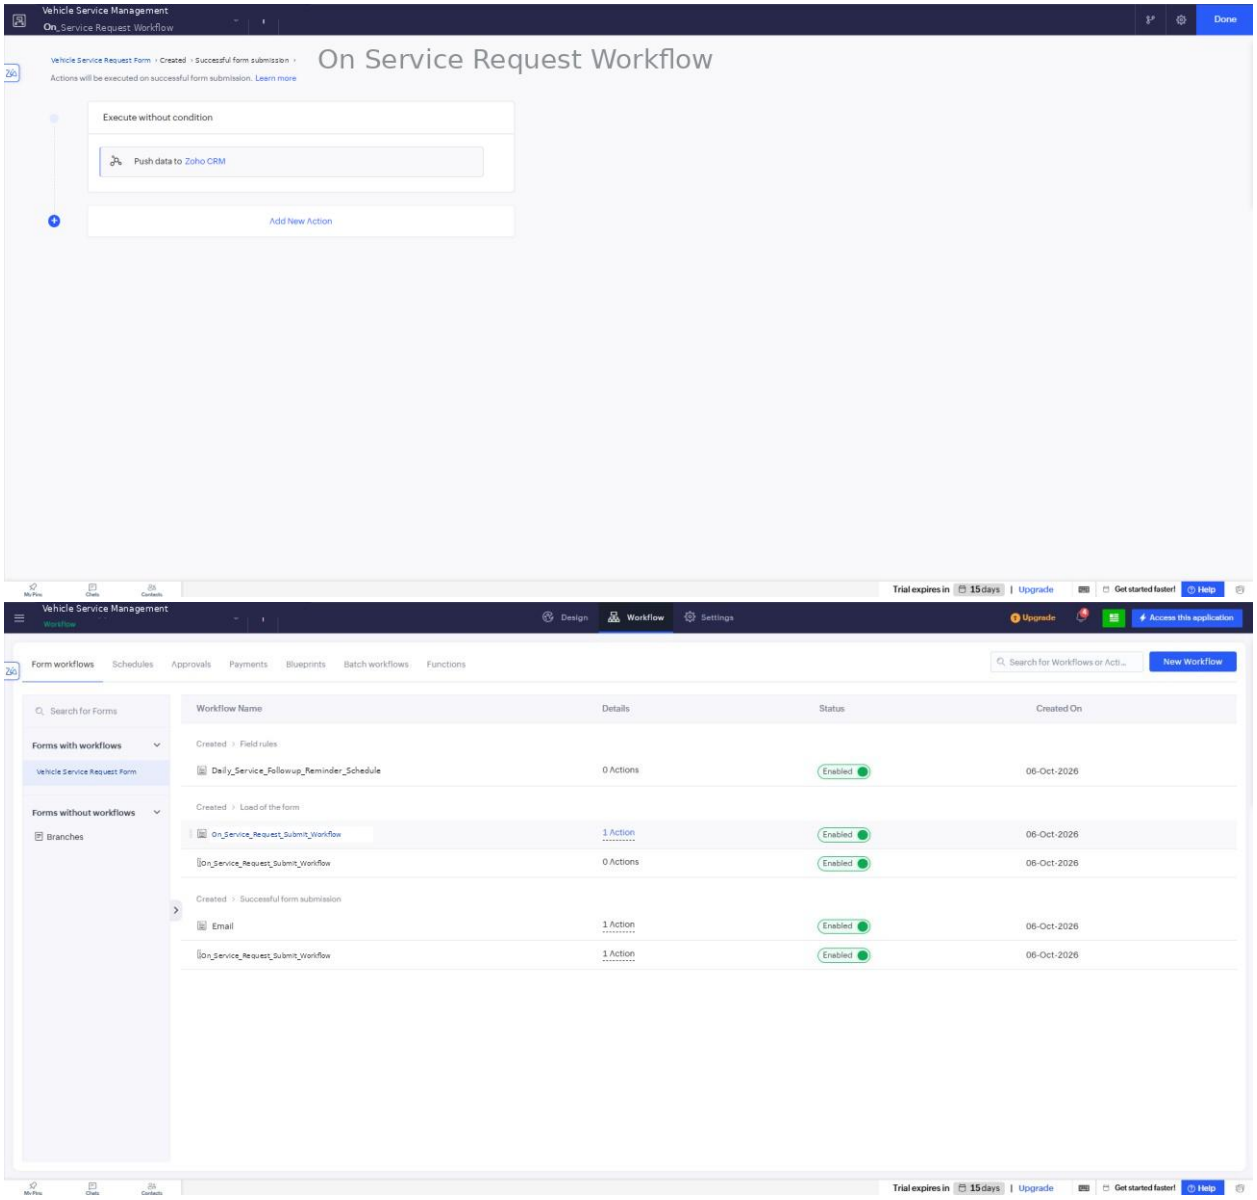

Aim

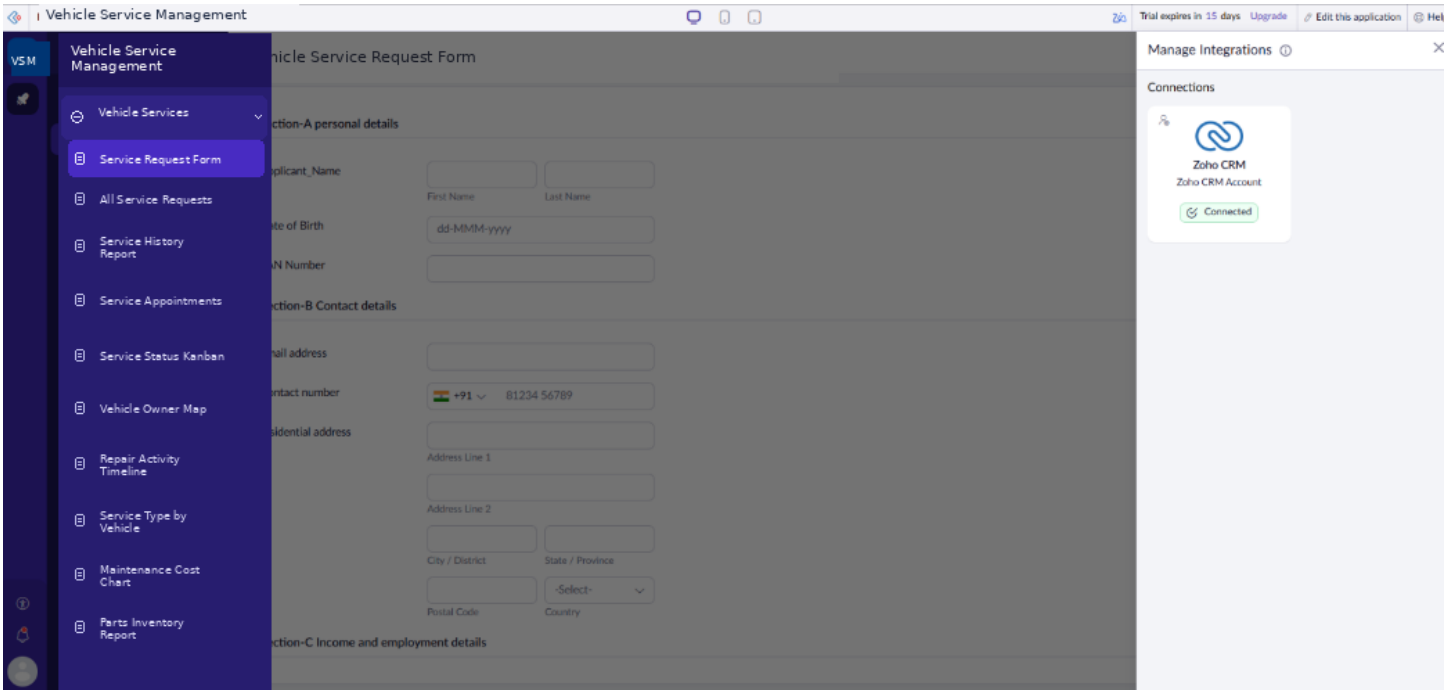

To design, develop, and integrate a custom Vehicle Service Request form in Zoho Creator with Zoho CRM using authenticated connections and automated workflow actions, enabling seamless customer and service-record creation and data synchronization upon successful form submission.

Procedure

1. **Application Setup:** Log into the Zoho Creator platform and create a new application titled `Vehicle Service Management.`
2. **Form Design: Construct the Vehicle_Service_Request_Form incorporating Section-A (Customer details: Customer Name, Vehicle Year, Vehicle Registration Number), Section-B (Contact details: Email, Phone, Address), and Section-C (vehicle details and service requirements).**
3. **Integration & Authentication:** Navigate to *App Preferences* > *Manage Integrations*. Select Zoho CRM and establish a secure OAuth connection. Verify that the connection badge displays **Connected**.
4. **Workflow Configuration: Go to the Workflow tab, select the Vehicle Service Request Form, and create a new workflow under the trigger event Created > Successful form submission.**
5. **Action Mapping: Add an integration action inside the execution block to push customer and vehicle data directly to Zoho CRM modules, then toggle the workflow status to Enabled.**

Screenshots

Result

The Vehicle Service Management was successfully created and integrated with Zoho CRM. Whenever a customer fills out and submits the service request form in Zoho Creator, the workflow triggers automatically, successfully executing the API push action to synchronize customer and vehicle details into Zoho CRM in real time.
